Executive Summary

Introduction

This report presents the Pillar 3 disclosures of VBT Bank & Trust, Ltd. as required under the Basel II regulatory framework issued by the Basel Committee on Banking Supervision ("BCBS") applicable to all banks incorporated in the Cayman Islands and regulated by the Cayman Islands Monetary Authority ("CIMA").

The purpose of Pillar 3 is to combine the minimum capital requirements (Pillar 1) with the process of prudent management (Pillar 2) aiming the promotion of transparency and encouraging a market discipline by identifying a series of disclosure requirements that make available to the market participants information on regulatory capital, risk exposure and capital adequacy.

This report uses the figures as of 31 December 2023.

Business background

VBT Bank & Trust, Ltd. ("VBT" or "the Bank") was incorporated as an exempted company under the Companies Act of the Cayman Islands on 23 March 1987 and is a wholly owned subsidiary of VBT Holdings, Ltd., which is also incorporated in the Cayman Islands. VBT holds a category 'B' Banking and Trust license under the Banks and Trust Companies Act, a Mutual Fund Administrator's license under the Mutual Funds Act, as well as a Securities Investment Business license under the Securities Business Investment Act of the Cayman Islands.

VBT is also member of VISA International and SWIFT and was granted with a Broker Membership in the Cayman Islands Stock Exchange, limited by two conditions:

- (1) that it provides no securities advice or discretionary management services and
- (2) that it deals only with the securities of VBT Holdings, Ltd.

Scope of application

The disclosures and analysis provided herein below are solely in respect of VBT Bank & Trust, Ltd. in the context of local regulatory requirements, as there are no subsidiaries of the Bank.

Overview of Risk Management and Risk Weight Assets (RWA)

Risk management approach

The Bank's principal objectives are to attract a qualified group of depositors, to maintain the existing group of depositors, to offer a selected range of services, and to invest their money in a carefully selected pool of investments, as secure as the market circumstances permit.

The Bank utilizes an integrated approach to risk management to ensure that all material classes of risks are considered and that its risk management and capital management strategies are aligned with its overall business strategy and with its risk appetite, which was set out as "Moderate"

The Bank risk appetite provides a common set of measures for senior management and the Board to clearly indicate the level of risk we are willing to take.

The primary governance of the Bank rests with the Board of Directors who also has ultimate responsibility for risk management and to maintain an adequate internal control structure to identify and mitigate any risk that the Bank might be exposed.

Procedures for monitoring the appropriateness and effectiveness of the implemented controls are embedded within the normal operations of the Bank and are carried out by management as part of their day-to-day responsibilities.

Additionally, through the appointed committees, proactive identification and monitoring is made facilitating the reporting and escalation of any risk concerns from business units upwards to the Board:

- Accounts Committee
- Credit Committee
- Treasury Committee
- Trust Committee
- Operational Committee
- Prevention and Control of Money Laundering and Terrorist Financing Committee
- Technology Committee
- Internal Audit

From the above-mentioned committees, the treasury and the internal audit committees have a crucial role in supporting the Board to meet its risks management obligations.

The treasury committee has a primary responsibility in the key risks that the Bank face, therefore certain duties have been delegated by the Board to this committee, such as, the formulation and review of the institution's investment strategy and objectives as well as the monitoring of the Bank's capital adequacy, assets and liabilities mismatches, liquidity implications and investments portfolio to assess the Bank's exposure and tolerance to market movements.

Through the internal audit committee, a strong collaborative feedback takes place between the Board and independent members with appropriate range of skill and experience covering all the business units and functions of the Bank.

Overview of Risk Weight Assets (RWA)

The Bank utilizes the stipulated standardized approaches under the Basel II framework, which stipulate the application of risk-weights to each exposure based on credit rating grades that are broadly aligned with the respective counterparty.

The following table summarized the risk-weighted assets and the capital requirements for each type of risk at years-end 2023 and 2022. The capital requirement amounts have been obtained applying 15% of the corresponding risk-weighted assets:

		C	0V1: Overview of RV	VA
		а	b	С
		R	WA	Minimum capital requirements
		2023	2022	2023
1	Credit risk (excluding counterparty credit risk) (CCR)	120,577,254	126,086,275	18,086,588
2	Securitisation exposures	-	-	-
3	Counterparty credit risk			
4	Of which: current exposure method	-	-	-
5	Of which: standardized method	-	-	-
6	Market risk	13,569,511	17,491,168	2,035,427
7	Of which: Equity risk	-	-	-
8	Operational risk	-	-	-
9	Of which: Basic Indicator Approach	13,087,074	17,815,761	1,963,061
10	Of which: Standardised Approach	-	-	-
11	Of which: Alternative Standardised	-	-	-
12	Total (1+2+3+6+8)	\$ 147,233,840	\$ 161,393,203	\$ 22,085,076

The table above reflects a decrease in total RWA in 2023 compared to the previous year. This movement is the result of the reduction of the total investment portfolio and the increase of forward foreign currency contracts that contribute to hedge against currency exchange rate risk and the total market risk in accordance with the standardized approach under the Basel II framework.

Linkages between financial statements and regulatory exposures

The following table provides the differences between carrying values presented in our financial statements prepared in accordance with International Financial Reporting Standards ("IFRS") and our regulatory exposures.

9	Exposure amounts considered for regulatory purposes	202,694,692	181,495,431	-	-	54,771,799

Our banking book regulatory carrying values reflect US\$33,572,538 related to investments that are subject to credit risk and to market risk as they are in a currency different than United States Dollar.

Capital

The Bank has a simple capital structure of common equity exclusively and is fully issued in amount of US\$22,500,000.00 divided into 22,500,000 shares of a nominal or par value of US\$1.00 each with power as it permitted by law.

The table below provides the composition of the capital according with the capital adequacy framework (Basel II).

Composition of regulatory capital

Capital requirements for operational risk Requirement	-
Basic indicator approach	1,963,061
Standardized approach	
Alternative Standardized approach	
Total and Tier 1 capital ratio	22,085,076

The bank has adopted the stipulated standardized approach for calculation of the Basel II Pillar I minimum capital requirement adopted by CIMA.

The adequacy of the capital is monitored by the Board of Directors through the Treasury Committee to ensure that the capital is more than adequate to support the Bank business activity and that is aligned with its overall business strategy.

The Bank seeks to minimize any associated risk in order to preserve its capital with a moderate growth, maintaining at the same time safety and soundness, even under adverse scenarios.

Additionally, as part of the capital adequacy measures, an Internal Capital Assessment Process ("ICAAP") is prepared on annual basis to determine its appropriateness taken into consideration current and future risks as well how the Bank intends to mitigate those risks.

Credit Risk

The Bank defines Credit Risk as the risk of loss resulting from a counterparty being unable to meet its contractual obligations to the Bank in respect of loans or other financial instruments. Credit risk comprises default risk, recovery risk, counterparty risk, the credit risk in securitization, cross border (or transfer) risk, credit concentration risk and settlement risk.

The Bank has in place an extensive credit policy, which governs the provision of credit and its inherent risks. The policy document includes (but is not limited to):

- the identification of the main credit risks inherent to the Bank's activities and how these should be managed and assessed;
- standard procedures for credit approval and review;
- the parameters governing the credit portfolio held by the Bank, and
- pre-determined credit authority lines.

As part of the credit granting process an analysis is made by the Credit Committee taken into consideration among other factors, the borrowers background, the industry where operates, the purpose of the loan, the value and type of assets placed as collateral and also required a revision by the Compliance Unit to ensure that the loan has a legitimate purpose and is consistent with the applicant profile; and that the parties involved are not designated persons listed on sanction lists or involved on money laundering, terrorism financing, proliferation financing and/or corrupt activities.

Notwithstanding the Credit Policy, the Bank is mainly involved in investment transactions with very limited lending activity to third parties, and may request the pledging of a collateral at its discretion.

In regards to the Bank's fixed income portfolio, all securities must be rated investment grade by either S&P or Moody's and should be fully marketable and able to meet modest capital demands with minimal effect on market valuation. Non-investment grade instruments could only be purchased with very limited exposure and with prior approval of the Treasury Committee.

The following tables analyze the Bank's credit risk exposure as at 31 December 2023. It is important to note that there are not defaulted or missed contractual obligations on loans and debt securities exposures:

			CR1: Credit quality of assets									
							ances /	Net	values (a+b-

4	Of which defaulted	\$-	\$-	\$-	\$-	\$-	\$-	\$-					

Credit Concentration Risk

Concentration risk is considered as a significant factor in assessing the exposures of concentrated loan and investments portfolios. Through the treasury and credit committee, ongoing monitoring is made to identify any aggregated balance that can represent a large concentration and that may adversely impact due to economic factors or asset quality.

The investment portfolio is diversified so no more than 4% of the portfolio (at time of purchase) is invested in any one issuer.

The policy of the Bank in offering and approving loans is also very selective. Revision of the loan portfolio is made on weekly basis by the Treasury Committee. Additionally, monthly follow up of current loans interest accrual, payment and collateral pledge of the loans are performed by the Credit Committee determined that all loans are collectible and as of 31 December 2023 there are not pass due loans.

Credit exposures by type of exposure

	Exposure carrying amount
Corporate bonds	72,911,729
Mortgage and asset-backed obligations	56,720,496

Leverage ratio

The Bank is subject to leverage ratio requirements under Basel III framework.

This ratio was introduced by CIMA as a simple, transparent, non-risk-based ratio that supplement the capital requirements rules of Pillar I. Banks are required to maintain a minimum ratio of 3%.

The following tables present the components of the ratio as of 31 December 2023 and 2022.

		Summary comparison of account ratio exposure m	
		2023	2022
1	Total consolidated assets as per published financial statements	223,490,040	228,578,337
	Adjustment for investments in banking, financial, insurance or commercial

Basel III leverage ratio (including the impact of any applicable	82,486,757	228,666,926
temporary exemption of central bank reserves)	82,486,757 223,668,030	
Basel III leverage ratio (excluding the impact of any applicable	82,486,757	228,666,926
25a temporary exemption of central bank reserves)	82,486,757 223,668,030	
26 National minimum leverage ratio requirement	82,486,757 223,668,030	
27 Applicable leverage buffers	82,486,757 223,668,030	

At the end of 2023, the Bank's leverage ratio amounted to 36.88% well above the minimum threshold, also reflecting a lightly increase with respect to 2022 figures due to the increment of foreign exchange currency contracts and the total shareholder's equity during the period.

It is worth to note that this comfortable level is explained by the limited use by the Bank of derivatives instruments.

Liquidity Risk

Liquidity risk is defined by the Bank as the risk of experiencing difficulty in facing the Bank assets and meeting its contractual payment obligations or to be only able to do so at an unacceptable cost.

The Bank manages this risk by investing primarily on listed stocks and listed instruments of fixed income, which must be rated investment grade by either S&P or Moody's, and should be fully marketable and able to meet modest capital demands with minimal effect on market valuation.

Also, the Bank's treasury department manages its cash flow to maintain an adequate cash position to meet liquidity demands from customers. This position could change if the liabilities structure varies as well.

Based on the treasury department's expectations on interest rates and other market factors the Treasury Committee approves an investment strategy that defines the duration and structure of the Bank's assets and liabilities.

The liquidity of the Bank is managed and monitored by the Treasury Committee and the Board. The investment policy states that:

- VBT primarily invest in listed stocks and listed instruments of fixed income. All the trades should be executed through an exchange, or in the case of an investment in the primary market, directly with the issuer;
- VBT's fixed income are fully marketable and in their majority are rated investment grade by either S&P or Moody's;
- Up to 75% of money market investments shall be rated A1 or P1 (or equivalent) by either S&P or Moody's, with the remainder not less than A3 or P3;

Continuous monitoring of the investments is performed to evaluate the adequacy of the assets and their risk as well to assess how earnings can be affected by future market conditions.

The table below presents an overview of the Bank's balance sheet items broken down into maturity buckets and the resultant liquidity gaps.

	Less than three months	Between three months and one year	More than one year	No stated maturity	Total

Market Risk

Market risk is defined by the Bank as the risk of loss in the Bank's income or net worth arising from potential adverse change in interest rates, exchange rates or other market prices.

The Bank's Investment Guidelines sets out the formal exposure limits for trading and operations, in addition to the monitoring and reporting procedures. It is the Bank's policy to use investment tools in order to increase or diminish the volatility of the price, interest rate or any other factor that could influence the valuation of their investments. Derivative products such as forwards, swaps and options among others, could be used to control the risk and yield of the portfolio as well as asset-liability mismatches. Any breaches of the exposure limits identified by the Bank are reported to the Treasury Committee outlining the nature of the breach, the circumstances surrounding the occurrence together with the corrective actions being taken. The Bank monitors effectively foreign exchange exposures to minimize its risk.

The table below presents an overview of the Bank's market risk under standardized approach as at December 31, 2023.

		MR1: Market risk under the standardised approach

Operational Risk

The Bank defines Operational Risk as the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events and outsourcing arrangements. In the case of legal and contractual risk, this includes the risk of loss due to litigation arising from errors, omissions, and acts by the Bank in the conduct of its business.

The Board of Directors has analyzed the Operational Risk in three stages. In the first instance, they analyze the risks identified in CIMA's Guidance and Basel II, as detailed below. Subsequently, they assess other elements of Operational Risk on an individual basis, e.g. fraud risk. Finally, they consider any operational risk that is particular to the Bank, its size and its functionality within the Bank.

Type of Risks	Bank Assessment
Reputation Risk	The Bank defines Reputation Risk as being "the risk arising from adverse perception of the Bank's image on the part of customers, counterparties, stockholders, investors or regulators". The Bank has identified Reputation Risk to be a significant risk but notes that it has strong corporate governance measures in place to help mitigate the risk.
Regulatory Risk	The Bank defines Regulatory Risk as being "the risk arising from a failure to comply with the laws, regulations or codes applicable to the financial services industry in the Cayman Islands".
Pension Risk	As required by the Pensions Law of the Cayman Islands, the Bank has established for its employees a defined contribution pension scheme with a third party pension provider. Payments are made to an independent administered fund; therefore, the pension risks are considered minimal or nonexistent.
Business and Strategic Risk	The Bank defines Business and Strategic Risk as "the risk of loss due to uncertainty in profits or revenue that damages the brand or operational economics of the business. It includes volatility caused by changes in the competitive environment, new markets entrants, new products or failure to develop and execute a strategy or anticipate or mitigate related risk". The Bank has identified Business and Strategic Risk to be a non-significant risk for the Bank, given that the Bank is primarily a deposit taking institution.

The Bank has also analyzed other common sub-types of operational risk which include internal and external fraud, workplace safety, employee dependency and business disruption and system failures to enable a thorough assessment to be made of risks inherent within the business.

Operational Risks	
Type of Risks	Bank Assessment
Internal Fraud	 During the reported period no incidents of internal fraud were identified. Insurance cover is in place for fraud.
External Fraud	 Procedures are in place through enhanced sign-off requirements. Annual Know Your Customer/Anti Money Laundering/Anti Bribery Corruption trainings are provided to the staff.
Control Risk	 The Bank provides regular reports to senior management and the Board of Directors detailing specific risks and any material control breakdowns. The Bank's senior management ensures that controls are followed in line with the Bank's policies and procedures.
Workplace safety	 An employers' liability insurance policy is in place. Fire would be a significant incident but all necessary precautions have been taken and are observed.
Clients	 The Bank continuously review the processes to ensure the clients get the best service.

	 A dedicated email address is in place for complaints and information requests. The email account is monitored to ensure that an appropriate follow up action is taken.
Business practices and products	 Management or other third parties have not identified any business issues and internal audit revisions are in place covering all the relevant business areas.
Business disruption and system failures	 A business continuity plan is in place and the business performs regular tests to ensure the appropriateness of the plan. No issues have been highlighted.
Damage to physical assets	These are insured events for which the Bank has proper insurance coverage.
Information processing and communication	 Third party service providers are contracted to support information processing and communication within the Bank.
Employee Dependency	 The Board of Directors is aware that there are certain key individuals whose presence is necessary for the proper functioning of the Bank and that it may be difficult to find replacements for these individuals, especially in the short-term, however, a succession plan is in place to ensure the continuation of their position in the event of unplanned or extended absence.

The Bank adopts the Basic Indicator Approach to calculate capital requirements for operational risk.

The following table sets out the total regulatory capital requirement under Pillar I for operational risk.

Operational Risk Capital Charge		Minimum regulatory capital	Operational risk capital charge as a %of minimum regulatory capital
\$ 13,087,074	\$	1,046,966	8%

Interest Rate Risk in the Banking Book

Interest rates are one of the most important underlying factors in the movement of bond prices and are closely monitored on a monthly basis by the Treasury Committee. Duration and Modified duration concepts are used on the Bank's bond portfolio to prepare an interest rates sensitivity analysis. The bigger the duration number, the greater the interest-rate risk or reward for bond prices. Modified duration follows the concept that interest rates and bond prices move in opposite directions. This formula is used to determine the effect that a 200-basis-point (2%) change in interest rates will have on the price of a bond.

Through these analyses, the Treasury Committee has the tools to measure and address different potential scenarios for its fixed-income portfolio valuation due to shifts in interest rates, which will influence its investment decision making process.

In order to evaluate interest rate risk, the Bank carries out sensitivity analysis, calculating the effect of a 200 basis points parallel shift in interest rates on its economic value, which is the present value of the expected net cash flows.

The following tables present the results of a 200bp shift in interest rate, reflecting at 31 December 2023 a total impact of \$10,911,316 on economic value, accounting for 13.23% of the Bank's capital base in USD. Management considers that this would not affect the minimum Capital Adequacy Ratio required by CIMA (CAR 15%), because of the surplus of the Bank's eligible capital of \$60,401,681.

Remuneration

The guiding principles of the Bank compensation system are aligned with the global business strategy and aimed to encouraging and rewarding performance and to reflect the responsibilities and skills required for each role.

The below information presents, some common factors considered in determine the compensation:

- Board members are compensated based on their attendance to Board meetings;

- Senior management and staff compensation is set among others, upon:

- Appropriate qualifications, skills and experience
- Level of responsibilities and its fulfillment
- Contribution in the achievement of key business goals
- · Competitiveness in accordance with market practices for similar roles and skills
- Economic condition of the country and working culture
- Long term commitment, professionalism and attitude towards goals and achievements

The Board of Directors is responsible to actively monitor and oversight the compensation system to ensure that it is operating as intended.
